

Nkeng Sama Mokom

Software engineer · B.Eng. Computer Engineering student

Buea, Cameroon · WAT / UTC+1

yungkaporaz@gmail.com github.com/Sama-Mokom [LinkedIn](#)

Profile

Final-year Computer Engineering student building full-stack software with Laravel, React, Vue and TypeScript. Experience contributing to a production education platform through reviewed pull requests. Interested in data correctness, understandable interfaces and systems designed for local infrastructure constraints. Currently developing cloud and delivery skills through CampusDesk.

Experience

V-Groups

August 2026 — January 2027

Software development intern · second stint · Yaoundé, Cameroon

- Building familiarity with the development workflow through GoHighLevel applications, CRM automation and platform integrations.
- Working with workflows, OAuth 2.0, webhooks and custom workflow actions.
- Studying cloud concepts independently, with CampusDesk's Docker and AWS deployment planning as a practical next step.

Njomi Tech Solutions

Approximately six months · ended March 2026

Junior developer · Remote · Douala, Cameroon

- Helped improve user-onboarding speed by 30% through onboarding-related contributions.
- Corrected stale filter and pagination state, introduced server-side search, and improved responsive layouts.
- Diagnosed an OAuth configuration issue and worked through issues and pull requests for team review.

V-Groups

Earlier internship · onboarding

Software development intern · first stint · Yaoundé, Cameroon

- Built X-Clusive with Vue 3, Node.js and PostgreSQL to learn the stack.
 - Developed practical familiarity with frontend interfaces, API integration and relational data modelling.
-

Education

University of Buea

Expected graduation: 2027

B.Eng. Computer Engineering · Level 400

Faculty of Engineering and Technology

Relevant work: advanced databases, cloud computing, software verification and validation, human-computer interaction, computer networks and mobile application development.

Selected projects

CampusDesk

Sole engineer · Laravel, Vue 3, TypeScript, MySQL · Active

- Built a university document request and tracking system with four role-specific dashboards, now wired and tested.
- Resolved a concurrent stage-claiming problem with transactional checks and row locking; modelled auditable request transitions.
- Currently planning CI/CD and deployment with Docker and AWS.

NetInsight

Team coursework · React Native, Node.js, MongoDB · Delivered

Worked on a mobile network-quality project shaped around Cameroon's connectivity constraints, with requirements, modelling and an offline synchronisation architecture.

GoldStrat / SMC_EA

Quantitative systems experiments · MQL5 · Active

Investigated position-sizing correctness, order constraints and regime dependence through systematic backtesting. This is software validation work, with no live trading record.

Cameroon Music Industry Platform

CIMFEST Hackathon 2025 MVP · Halted after Milestone 2

Contributed to a team MVP for my first hackathon, hosted by CIMFEST in partnership with NervTek. Our team placed 11th out of 21. Used Next.js with exploratory NestJS experience.

Technical skills

Frontend	TypeScript · JavaScript · React · Vue 3 · Next.js
Backend	Laravel · PHP · Node.js / Express · Flask
Data	MySQL · PostgreSQL · MongoDB · SQL
Infrastructure	Docker · AWS EC2 / S3 · Linux · Git
Quality	PHPUnit · Pest · Vitest · Playwright · Cppcheck
Modelling & communication	ERDs · UML · State diagrams · Technical specifications

Community

Volunteer with the Grow You Grow Me Foundation, supporting access to education in Cameroon; produced its April 2026 launch pamphlet. Attended AWS Community Day Cameroon in two consecutive years.
